DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9 and 23-31, drawn to an Al-Zn alloy, classified in class 420, subclass 532.
 - II. Claims 10-22, drawn to process of ingot casting and heat treating an Al-Zn alloy, classified in class 148, subclass 549.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a materially different process such as continuous strip casting.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with William Blake on April 21, 2005 a provisional election was made without traverse to prosecute the invention of I, claims 1-9, 23-31.

Affirmation of this election must be made by applicant in replying to this Office action. Claims 10-22 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Art Unit: 1742

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-9, 23-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Warner (US 2002/0162609A1).

Warner teaches an alloy with 9-11% Zn, 1.8-3.0% Mg, 1.2-2.6% Cu, at least one of Mn, Cr, 0.05-0.20% Zr, Hf, V, Ti and 0.05-0.3% Sc (abstract), which significantly overlaps the presently claimed alloying ranges (cl. 1-7, 23-29).

Overlapping ranges have been held to be a prima facie case of obviousness, see MPEP § 2144.05. It would have been obvious to one of ordinary skill in the art to select any portion of the range, including the claimed range, from the broader range disclosed in the prior art, because the prior art finds that said composition in the entire disclosed range has a suitable utility. Because Warner teaches a substantial overlap in alloying ranges, it is held that Warner has created a prima facie case of obviousness of the presently claimed invention.

Concerning dependent claims 8 and 30, Warner teaches said alloy typically contains

Art Unit: 1742

about 0.05% Si and 0.07% Fe (see Table 4), which falls within the instant ranges.

Concerning dependent claims 9 and 31, Warner teaches said 7xxx series alloy has excellent mechanical properties and is suitable for high strength rolled, extruded, or forged products {0002}, [0005], such as aerospace wings [0002].
